All the change makers

ABOUT THE AUTHOR

Adel Eshan A..R

"I'm an environmental enthusiast from the UAE who believes that 'Change begins inside.' I enjoy reading and writing books, and I believe that in order to have a positive impact on the world around us, we must first make changes inside ourselves. That is why I am interested in learning about environmental concerns and being current on global topics. Furthermore, I am dedicated to making a difference by volunteering for environmental organizations and participating in conservation activities such as cleanups, tree planting, and awareness campaigns."

Once upon a time, there was a young girl named Sarah who lived in a small village. Sarah was an avid nature lover and always wanted to do something to protect the environment. The village Sarah lived was a remote village, deep in the heart of the countryside, there was only one school, which catered to the village children. Sarah had to walk several miles to reach school . Due to a lack of funds and resources, building another school seemed impossible for the villagers.

Every day, she used to walk to school, passing by a scenic route that took her through the village. The girl loved her village's stunning surroundings, but one thing that deeply bothered her was seeing plastic waste scattered all over the streets. The village was sprawling with heaps of plastic waste carelessly dumped wherever the convenience struck.

The garbage and plastic waste
littered the streets, clogged the
drains and polluted the nearby rivers
and fields. The sights of her village
saddened her heart. She felt a strong
urge to do something about it.

One day, while coming back from school Sarah stopped at the heaps of plastic and began to think 'What can I do?' I must do something.

Yes! Got an idea. I will collect this plastic bottles and do something useful' she told to herself

Sarah started collecting plastic bottles and other waste every day after school and stored them in a corner of her backyard. She started working on her project daily after coming back from school.

Sarah began to use her creativity and came up with innovative ideas to recycle the plastic bottles. She started making flower pots, bird feeders, and even small home decor items such as lamps, vases, and pen holders. Her mother Aysha began to take notice of her hard work and supported her efforts. Aysha would go to market and buy gum, threads and other necessary items for Sarah. As she made more and more items, people began to take notice of her creativity, and her recycling center started to get popular. People started to bring recycling materials to Sarah.

One day Sarah's school asked her to participate in a national competition. The competition was to showcase the best innovative ideas that could solve real-world environmental problems. Sarah started to prepare for her competition and came up with a brilliant idea that could change the real world problems .She design a Eco brick from single use plastic.

One day Sarah's school asked her to participate in a national competition. The competition was to showcase the best innovative ideas that could solve real-world environmental problems. Sarah started to prepare for her competition and came up with a brilliant idea that could change the real world problems .She design a Eco brick from single use plastic.

The villagers chief was skeptical at first, but Sarah's dedication won them over, and he accepted the plan. The materials were collected from all around the village, and everyone in the community contributed to the project. People recycled plastic bags, bottles and containers, and they collected other materials like sand, cement, and wood from nearby areas. Weeks turned into months, and the project made steady progress. As a result of the collective effort of the villagers, the school was finally completed. The school was equipped with basic infrastructure and was a vast improvement over the older dilapidated one. Sarah became a source of inspiration for surrounding villages and spurred the growth of a recycling movement.

Her success, though modest, inspired many people to develop innovative ideas for protecting the environment. News channels and media houses started featuring Sarah's work, which brought her cause to the national spotlight.

As a result, more people started recycling, and Sarah's idea spread far and wide, not just villages but across the country. Sarah's innovative project not only inspired young minds but also adults.

They started taking part in managing their waste and recycling, leading to a cleaner and safer planet.

And so, Sarah's efforts transformed a small village into a hub of innovative environmental ideas. Her project not only changed her village but inspired a nation to take action and work towards a cleaner planet.

"From Waste to Wonder" is a touching story of a little girl who begins recycling plastic waste in her town. Despite obstacles, Sarah's hard work and commitment resulted in the creation of a new school made of recycled materials.

Her creative ideas inspire others, and the book demonstrates how tiny efforts may lead to big changes. This captivating story is ideal for readers of all ages who care about the environment.
